

PAK MARTIN INTERNATIONAL

Manufacturer & Exporters of Surgical, Dental and Beauty Instruments

DENTAL INSTRUMENTS CATALOGUE

PAK MARTIN INTERNATIONAL

DEAR VALUABLE CUSTOMER

PAK MARTIN INTERNATIONAL is a leading manufacturer and exporter of all kinds of single use and reusable Surgical & Dental instruments to worldwide. Our manufacturing unit is located at Sialkot (Pakistan), a world's renowned city for the manufacturing of Surgical & Dental Instruments. This is our family business, so we have worked hard to build our reputation in this evolving industry and our satisfied customers are our strength.

Our products are manufactured by using the best quality stainless steel as **AISI, ASTM** and **DIN** standard's recommended which is imported from **Germany, Japan** and **France**. All of the Surgical & Dental Instruments supplied by us are **ISO 9001:2015, ISO 13485:2012** and **CE** marked certified in accordance with the Medical Devices Directive. The key to our success is our quality assurance. We use the right material for the right products. We are also **OEM (Original Equipment Manufacturer)** and provide customise packaging to our customers.

We have vast range of different instruments available in our stock ready to be shipped for fast delivery to our valuable customers. By using the traditional craftsmanship and latest precision technologies, we are able to manufacture the instruments that are compatible and compete with the highest standards and quality of international markets. **PAK MARTIN INTERNATIONAL** is strongly determined to provide a dedicated service to customers that is built on foundations of quality and cost effectiveness.

PAK MARTIN INTERNATIONAL prices are very competitive and very flexible with customers provide maximum co-operation. Our company's motto is to keep customers satisfy because your satisfaction is our business.

Our Mission At PAK MARTIN INTERNATIONAL

1. To provide our customers with outstanding customer support and provide premium quality Surgical & Dental instruments at the best and competitive prices.
2. To provide our customers with friendly support, easy-to-use ordering system.
3. To provide our customers with the latest products available.

Our Policy At PAK MARTIN INTERNATIONAL

1. To be the market leader in supplying the best and premium quality Surgical & Dental instruments at highly competitive and affordable prices.
2. Fully understand the requirements of our respected customers and satisfy them.
3. Strongly follow the policy "**Customer First**" and "**Quality First**"
4. To continuously develop our technical expertise on the basis of technology, customer's feedback and quality workforce

5. To form strategic joint ventures and distribution networks within the industry around the globe and to fulfill our social, ethical and industrial obligations in the most effective and efficient manner.

Our Strategy At PAK MARTIN INTERNATIONAL

- 1) It is our utmost priority to serve our valuable customers with fair dealing, honesty, sincerity, truth, trustworthy relationship and cooperation.
- 2) We always cordially welcome our valuable customer's opinions, suggestions and recommendations.
- 3) We give replacement against defective goods, if the malfunction occurred at our end.
- 4) The stainless steel used in the production of purchase order is exactly the same as per approved samples.
- 5) Normally for cutting instruments like Scissors, Knives etc. we use (AISI 420 Grade) premium quality stainless steel.
- 6) For non-cutting instruments like Forceps, Tweezers, Impression Trays etc. we use (AISI 410 & AISI 304 Grade) premium quality Stainless Steel.
- 7) Moreover, we can use also the material as per our customer's requirements and demand.

If you would like to get our price list, interested to see our samples for quality assessment, would like to be our distributor or want to get more information about our premium quality instruments, please feel free to contact us for any information.

Thank you very much for your precious time and looking forward to get business from you.

Best Regards

Director

PAK MARTIN INTERNATIONAL

Quality Management System

The quality policy is the main guiding principles that provide the focus of quality to the whole organization and improve the effectiveness of the quality management system.

Quality Begins With People Who Care

PROCESS FLOW CHART

PAK MARTIN INTERNATIONAL

Manufacturing Capabilities Of PAK MARTIN INTERNATIONAL

All of our production departments are well equipped with the latest machinery which is imported from **Germany** and **England** and are well-staffed with the expert technicians.

Raw Material Department

PAK MARTIN INTERNATIONAL always purchases best quality stainless steel raw material from steel suppliers or import directly from **Japan, France** and **Germany** when need to do. Different grades of stainless steel for example **(303, 304, 410, 420 & 440)** are used in the production of our Surgical & Dental Instruments.

At **PAK MARTIN INTERNATIONAL**, we believe that quality can only be achieved through quality raw material. As such, the best quality raw-materials (Stainless Steel Strips, Round Bars, Stainless Steel Coils and Stainless Steel Tubes) are purchased and are subjected to composition and hardness testing through our in-house laboratory in order to ensure that only the best materials are passed on to production departments.

ASTM Standards

PAK MARTIN INTERNATIONAL fully follows and complies with the international **ASTM Standards** during the manufacturing of instruments. Below mentioned are the references and lists of the standards that we follow:-

- 1) **PAK MARTIN INTERNATIONAL** acquires premium quality stainless steel for the manufacturing of Surgical & Dental Instruments as per **ASTM Standard F899-95 and ISO 7153**.
- 2) Descaling and cleaning of stainless steel in conformity to **ASTM Standard A380-99**.
- 3) Passivation of Surgical & Dental Instruments in conformity to **ASTM Standard B967-05**.
- 4) Corrosion of Surgical & Dental Instruments in conformity to **ASTM Standard F1089-02**.
- 5) Electro-polishing of Surgical & Dental Instruments in conformity to **ASTM Standard B912-02**.
- 6) As different instruments are manufactured with different grades of stainless steel. We mostly use the stainless steel type **AISI-303, AISI-304, AISI-410, AISI-420, and AISI 440** series with defined specifications as per customer's requirements. Therefore, in order to select the proper grade of stainless steel, various processes are followed according to the guidelines and conformity of **ASTM Standards**.

PAK MARTIN INTERNATIONAL

Forging Department

PAK MARTIN INTERNATIONAL has its own forging section where forgings are made through Drop Hammer process by seasoned operators using dyes made of the best quality imported D-2 Steel. Forging is done by keeping in mind that the geometry of this process is a starting point and does not on any way limit your design freedom.

Milling Department

Milling is used in the Surgical & Dental instruments industry, defined as the process of cutting, shaping and finishing of an instrument. It is the process that includes turning, welding and fringing. At **PAK MARTIN INTERNATIONAL** we use the best milling technology which involves cutting away pieces of metal to create dovetails, threads, bevels, slots and ridges.

Grinding: (Filing & Setting)

In order to give a final shape to the instrument, our highly skilled craftsman use filing and grinding processes which removes the material from the instrument by abrasion. Then the instrument is keenly observed and set to perform perfect.

Hardness Test (Heat Treatment)

For Surgical & Dental instruments, the term harness refers to the resistance to bending, scratching, abrasion or cutting. We have in-house Heat Treatment Department equipped with top quality Vacuum Furnace where qualified staff and engineers are engaged in treating the instruments in order to add strength to the steel and perfect the metallurgical composition for further processes. 50-55 hardness rating is applied to each instrument during the heat treatment process in order to increase the strength of instruments.

Polishing Department

The Electro-polishing Department is manned by seasoned workmen using imported chemicals and best quality grinding wheels to ensure the best quality finish. In this department at **PAK MARTIN INTERNATIONAL**, the instruments are given final finish which includes mirror, satin or matt finishes. The finish is per customer's requirements.

Tungsten Carbide Department

PAK MARTIN INTERNATIONAL' tungsten carbide department is installed with the best quality imported machinery being manned by the exceptionally well trained experts using the German Technology. We use German tungsten carbide tips for our instruments.

PAK MARTIN INTERNATIONAL

Coating Department

Our coating department is capable of providing gold plated instruments as well as powder coated instruments depending upon the requirements of the instrument or the customer. Best quality coating related raw materials are used so that no compromise can be made on quality. Furthermore, each coating is inspected for quality before any instrument is passed on to the next department.

Passivation Department

We use high quality imported chemicals in our Passivation Department. Every instrument is boil test and passivate for 24 hours before move to the next department. If need arises, the instruments are re-passivated so as to eliminate any chances of rusting or corrosion during the life of the instrument. Our instruments are rust-free for life though we give guarantee for five years.

Sandblasting Department

For sandblasting of our instruments, we use the machines as well as the best quality sandblasting material, which are operated by skilled & well trained operators.

Stamping/Etching

We use permanent and long life high quality laser etching which produces a wide variety of text and graphic images including our customer's logo with very detailed and fine image quality.

Quality Control Department

Our quality control department is involved at all of the processes of manufacturing but before the instrument goes to the packing department, its quality and function is thoroughly checked by our qualified engineers.

Labeling and Packing

Each instrument is initially packed in a poly bag to prevent scratches and then packed in the middle box. Middle boxes are then packed in the carton. The middle boxes are labeled which includes the article number, types and sizes of instruments. We can also arrange packaging and labeling according to the customers demand.

Warehouse/Stock Room

After the instruments are packed and labeled, cartons are then move to our in-house warehouse where the complete record of shipments are maintained by our qualified warehouse management.

PAK MARTIN INTERNATIONAL

Terms and Conditions Of Business

Company's Agreement

PAK MARTIN INTERNATIONAL believes in the highest moral values and business ethics. Once a contract is made with a customer, we strongly aim at following it in its true spirit regarding the quality of product, packing, delivery time or any other particular need of the importer.

Prices

Our prices are stable for one year, after which they may be subject to a change depending upon general price increase of stainless steel. Instruments prices are revised according to the price of raw material and craftsmanship at the end of company's financial year.

Minimum Orders

We require a minimum order of US\$ 500.00 to process a delivery.

Payment Terms

With new customers, we require an advance payment of 100% for first six months. However, credit terms can be arranged according to the importers requirement after 6 months.

Freight & Shipping

PAK MARTIN INTERNATIONAL provides different methods of delivery as per customers demand:

- 1) By Air
- 2) By Sea
- 3) By Courier

Freight and shipping charges may be added to the invoice depending upon the nature of delivery unless otherwise stated by the importer. We deliver both C&F and FOB shipments.

Returns Policy

A great deal of effort is made on packing your order with great care. Please inspect the instruments thoroughly for any loss or damage immediately upon delivery of products and file claim if products are found damaged. Concealed loss or damage must be reported within 5 days upon receipt.

Returns and Technical Support

No returns are accepted without prior notices. Please contact our customer service team to obtain your invoice number. We reserve the right to examine returned goods before issuing credit. Returns must be made as soon as possible. Our technical team will carry out all repairs quickly and reliably.

CARE, HANDLING AND STERILISATION OF INSTRUMENTS

PAK MARTIN INTERNATIONAL Approved Sterilisation Methods

We recommend steam autoclave and ethylene oxide (ETO) sterilisation methods. Steam autoclave is highly efficient method of sterilisation which will not dull sharpness of instruments. If steam autoclave and ethylene oxide methods are not available, dry heat and chemical vapour methods are also recommended. We don't approve chemical sterilisation methods. These methods destroy instruments quickly and if used will eventually invalidate the warranty of your instruments.

Sterilisation Advice

Instruments should be dry before sterilising and in the open position when sterilised. Instruments trays should never be overloaded. Sterilising units must be cleaned and functioning properly. Autoclaves have high levels of moisture can be damaging if not in good working order. Purified, distilled water must be used in autoclave sterilisation units. We don't recommend using tap water. It contains minerals which can cause corrosion and discolouration of instruments. Take out the instruments from the autoclave immediately after cooling when the sterilisation cycle is completed. Ensure that all tips and joints of the instruments are moisture free. Moisture may cause corrosion. Before storage, instruments should be properly lubricated with silicon based lubricant.

Cleaning of Instruments

Always clean the instruments thoroughly in order to enhance the life span of your instruments. Bulk debris should be removed immediately after use. We recommend Enzymatic Cleaning solution in an ultrasonic cleaner to clean the instruments. Ultrasonic solution must be changed on daily basis. Instruments with hinge must be cleaned in an open position. Oxidation and discoloration may occur if instruments are not thoroughly cleaned. Always use disinfectants and detergents which are suitable for use with Surgical & Dental instruments. With regards to concentration and length of exposure, detergent manufacturer's instructions should be followed strictly. Tap water should be avoided during the cleaning of instruments. It contains minerals which can cause corrosion and discolouration of instruments. Tap water can also neutralise the rust inhibiting and lubricating solution.

We recommend the use of purified, distilled water in ultrasonic cleaning units. It is also recommended to use non-rinse ultrasonic solution that contains both lubricant and rust inhibitor prior to sterilisation and follow the manufacturer's exact solution measurement. Never leave the instruments in the ultrasonic solution after the cycle is finished. Instruments should be removed and dried immediately.

Lubrication of Instruments

Instruments must be lubricated regularly to increase the life time of instruments. It should be carried out daily or at least on a weekly basis. Prior to sterilisation, instruments must be lubricated. Lubricants designed specifically for precision hinged instruments should be used. Make sure to use lubricant that is well-suited with the operating temperature of your dry heat unit if dry heat steriliser is being used.

Sharpening of Instruments

Regular sharpening of instruments for example cutters will enhance their service life and increase their ability to cut more effectively and efficiently. **PAK MARTIN INTERNATIONAL** recommends frequency of sharpening the cutters depends on how frequently you use them and also the diameters and type of wires in which the cutter is being used frequently. Cutters must be assessed regularly if sharpening is required.

Corrosion

All of the instruments manufactured by **PAK MARTIN INTERNATIONAL** are highly resistant to corrosion. Following care recommendations and maintenance tips can be followed to further prevent corrosion problems. Occasionally, discolouration of instruments may not be corrosion. Sometimes organic materials that are deposited on the instruments during use can give the appearance of corrosion or can be mistaken for rust.

- 1) An orange-brown stain is normally a phosphate layer caused by water sources, sterilisation solutions or cleaning detergents.
- 2) A black stain is normally an acidic reaction caused by detergents.
- 3) A dark brown stain is usually caused by dried blood residues.
- 4) A blue-black stain is usually plating caused by autoclave cleaning materials.

Corroded instruments should never be mixed with non-corroded instruments as it may multiply the process of oxidation. We strongly recommend discarding or replacing the corroded instruments immediately.

Prevention of Corrosion

Corrosion can be an issue with any stainless steel instrument. Stainless steel requires oxygen to form a chromium oxide surface layer, which prevents it from corrosion. Bonding agents, organic residue and water droplets left on the instruments prevents oxygen to come in contact with the surface of the instrument and forming this protective layer.

PAK MARTIN INTERNATIONAL Recommends The Following Steps To Prevent Corrosion

- 1) Prior to the sterilisation of instruments, all residual matter must be cleaned thoroughly.
- 2) Instruments must be sterilised in open position.
- 3) Instruments must be properly air or towel dried. Specifically take care of the joint areas and hinges.
- 4) Corroded instruments should never be sterilised with non-corroded instruments as it may permanently transfer the iron oxide on the corroded instruments to the non-corroded instruments.

PAK MARTIN INTERNATIONAL Final Recommendations

- 1) All RE-USABLE instruments are delivered in NON-STERILE condition and must be cleaned, lubricated and sterilised before every use.
- 2) All instruments should be disinfected and cleaned immediately after use with disposable cloth/paper/ wipes etc.
- 3) If the instruments come into contact with blood, tissue, physiological saline or other foreign substances, they should be rinsed with warm (not hot) water before the substance dries up on the instruments.
- 4) We recommend cleaning solutions and rinse with pH7.0.
- 5) Ultrasonic cleaning is recommended.
- 6) For effectiveness, first clean any residue off the instruments before placing them in ultrasonic cleaner.
- 7) After cleaning, all instruments should be dried immediately.
- 8) Treat all instruments with oil which is considered as being physiologically safe (paraffin oil), especially their ends, ratchets, and moveable parts.
- 9) Instruments can be disinfected in Thermal Washer disinfectors.
- 10) For the disinfection and cleaning of Titanium and Aluminium Instruments, only use the substances that are particularly suggested for Titanium and Aluminium Instruments.
- 11) For instruments manufactured with autoclavable plastic, place them in the middle of chamber to avoid the overheating of plastic and not along the walls of chamber. We recommend to sterilise these instruments by putting them in "Self Sealing Sterilisation Pouches".
- 12) Do not leave instruments in cleaning or disinfecting solutions for a long time (over night or weekend) otherwise instruments can be damaged.
- 13) All instruments should be visually inspected for damage or breakage.
- 14) It is the user's responsibility to take proper care of the instruments.
- 15) We recommend laying down all instruments in their primary packaging.
- 16) Vacuum autoclave (steam) is preformed at the temperature of 134 °C.
- 17) If instruments are dry heat (hot-air) sterilised, the temperature should be between 180 °C to 190 °C.

- 18) Corroded instruments should be discarded immediately.
- 19) The instructions of the autoclave manufacturer must be observed and followed always.
- 20) Instruments must be stored in dry, clean and humidity free environment without direct solar radiation.
- 21) Protect pointed tips of instruments with cloth, gauze or a special protection tube available from PAK MARTIN INTERNATIONAL.

Maintenance of Instruments

PAK MARTIN Surgical always recommend to follow proper handling, care and sterilisation methods in order to increase the life span of your instruments in order to make sure they perform the best that they can.

Note: Always Use The Cleaning & Disinfection Solutions/Substances That Are Particularly Suggested For Specific Type & Category Of Instruments And Follow The Manufacturer Instructions.

Extraction Forceps

Dental forceps are pliers-like instruments that are used to grasp teeth.

A dentist will usually have a number of different ones on hand, each having a design that's tailored to:

The specific shape of the tooth it's intended to remove (such as incisors vs. molars having two roots vs. molars having three roots).

The location of the tooth in the mouth (such as front vs. back, or left lower molar vs. right upper molar.)

How they're used.

A dentist will grasp a tooth with their forceps and then firmly and deliberately rock it back and forth as much as it will.

Because the bone that surrounds the tooth is compressible, the socket will gradually start to expand.

As it does, the range of the dentist's side-to-side motions will increase.

In addition to this rocking motion, the dentist will also rotate the tooth back and forth.

This twisting action helps to rip and tear the tooth away from the ligament that binds it in place.

At some point, the socket will be enlarged enough, and the ligament torn away enough, that the tooth can be easily removed.

ROOT ELEVATOR

FUNCTION OF ROOT ELEVATORS IN SURGERY

To Loosen Tooth or Root From Bony Socket Prior to Placement of The Extraction Forceps.

HANDLES FOR ROOT ELEVATORS POINTS A, B, C, D, E, F, G, H

ROOT ELEVATOR

FUNCTION OF ROOT ELEVATORS IN SURGERY

To Loosen Tooth or Root From Bony Socket Prior to Placement of The Extraction Forceps.

CS Dental Root Elevators

To look at one of these instruments you might mistake it for a narrow screwdriver.

That's because just like one an elevator has a handle and then a specially designed "blade" or tip portion.

How they're used.

The tip of an elevator is designed to be wedged into the ligament space between a tooth and its surrounding bone (as shown in our animation).

As the elevator is forced into and twisted around in this space, the tooth is rocked around and pressed against the walls of its socket.

This helps to both expand the shape of the socket and separate the tooth from its ligament.

As this work is continued, the tooth gradually becomes more and more mobile.

In some cases, the dentist may be able to completely remove the tooth just using their elevator.

If not, they will choose a point where they feel they have accomplished as much as they can with it and will then switch to using extraction forceps.

LUXACUT

Luxacut Luxation Instrument

Over recent years, there has been an increased demand for reduced trauma during extraction procedures. The use of elevators has become widespread for the loosening of teeth before the application of forceps. Luxation instruments tips are more finely tapered than elevators tips. Their characteristics are a combination of a Periotome and an elevator. The sharp tip enables more efficient cutting of the periodontal ligament, whilst the tapering shaft assists with controlled expansion of the bony socket. The extraction operation may be performed with the minimum amount of tissue damage. Healing is therefore quicker and the operation is less distressing for the patient and surgical team alike.

The Luxacut Kit comprises of seven Luxation instruments, a straight, curved, inverted curved & contra blade version in Three different widths. Also available in dual edge blades

- PM2-471-L2S Straight Blade- Green-2 mm- Apical and/or Interproximal
- PM2-473-L3C Curved Blade- Black- 3 mm General use/Starter
- PM2-472-L3S Straight Blade- Grey- 3 mm Interproximal
- PM2-475-L3CA Contra Angle- Blue- 3 mm Lingual and/or distal-Molars
- PM2-474-L3IC Inverted Curved- Light Blue- 3 mm- General, Lingual and/or Distal
- PM2-477-L5C Curved Blade- Brown- 5 mm- Large molar roots- General use
- PM2-476-L5S Straight Blade- Yellow- 5 mm- Interproximal
- PM2-478-DE3 dual edge/straight grey 3 mm/1.5 mm
- PM2-479-DE5 dual edge/straight brown 5 Deep fractured/Decayed Roots

Dental Hand Instruments

The types of hand instruments can be categorized based on their function:

- Examining the mouth and teeth
- Scaling or professional cleaning of teeth
- Cutting teeth and removing cavities
- Placing and condensing filling materials
- Carving and finishing dental fillings
- Miscellaneous types
- Instruments used for examining the mouth and teeth

Mouth mirrors are used to examine the condition of the teeth and mouth, as well as to retract the tongue and cheeks upon examination.

Probes— There are many probes available but the main types are the straight probe, Briault probe and periodontal probe.

The straight probe is sharp and it is used to examine cavities in the dentine region as well as to check the margins of restorations or fillings.

The Briault probe is also sharp and it is used to detect the junction between the enamel and dentine. Briault can also be used to detect tartar hidden in the gum pockets.

A periodontal probe can be used to measure the depth of the gum pockets and for other measurements. Instruments for cutting and scraping tissues and deposits

Scalers remove tartar (calculus) on the tooth surface as well as those hidden in the gum pockets. They can also be used to remove other surface deposits and temporary crowns.

Excavators are used to remove softened dentine and temporary fillings. The back of the blade can also be used for placing linings between filling materials. Sometimes excavators can be used for carving metal or amalgam fillings.

Chisels are used to remove unsupported enamel during cavity preparation. Unsupported enamel can be harmful for it can compromise the longevity of the filling if not removed.

Hatchets and hoes have similar purposes to chisels. Instruments used for placing and condensing filling materials Plastic instruments convey and shape filling materials and are usually flat blades that do not use heavy pressure.

Some instruments have rounded ends for shaping and burnishing the surfaces of fillings. Plastic instruments are usually made of stainless steel for most materials though there are also thin Teflon-coated or titanium nitride instruments which are non-stick for composite fillings. **Condensers or pluggers** are used for compressing and forming filling materials. Heavy pressure is applied on use therefore these instruments are usually used for metal or amalgam fillings. Instruments used for carving and finishing fillings Carving and finishing instruments have sharp or semi-sharp blades of various shapes. They are used to carve materials by cutting and scraping.

Symptoms of Gum and Dental Problems

Gum Problem Symptoms	Healthy	Unhealthy	Dental Problem Symptoms
- Sensitive or soft gums - Swollen gums - Gum recession - Dry or shiny gums - Change in gum color (from pink to pale or pink to red) - Pain or burning in the gums - Gums bleed more easily than usual - Pus between the teeth and gums	 Crown Healthy gums Healthy bone level	 Plaque Tartar Irritated gum tissue Reduced bone level	- Dry mouth - Burning tongue - Tooth decay - Cavities - Jaw problems - Altered taste perception - Bad breath

PAK MARTIN INTERNATIONAL

DIAGNOSTIC, PERIODONTAL & RESTORATIVE INSTRUMENTS

VALUED BUYERS

Compare our scalers and curettes with the best in the industry and you will immediately recognize we are equal in every way but one... price. Note the deep precision knurling for better tactile feel. The same high-grade stainless steel tips, the same light weight (under 20 grams) for less hand fatigue, the same professional craftsmanship, and surpassing the highest industry standards. Of course, any manufacturer can make these claims, but we guarantee and certify ours. We regularly manufacturing below articles in showing handles & pattern A to L for better grip & perfection. We are also fully equipped & capable to develop these instruments as per your own specific requirements & demands in materials, sizes, shapes and patterns.

PAK MARRIN INTERNATIONAL

PM3-1370

Technical Datas:

Intercondylar distance	120 mm.
condylar inclination	fixed at 30°
Bennet angle	fixed at 7°
Incisal table inclination	10°
Distance between mounting plates	110 mm.
Weight	700 gr.
Opening	180°

features:

Lightweight anathomic articulator made of aluminum die-casting. it can be used following the geometrical laws of medium values (Bonwill triangle). Fixing according to centric. Automatic return to the hinge axis with springs. Perfect stability also in reversed position. Easy access and visibility to the lingual surfaces. interchangeable self centring aluminum mounting plates.

PM3-1371

Technical Datas:

Intercondylar distance	120 mm.
condylar inclination	fixed at 30°
Bennet angle	fixed at 7°
Incisal table inclination	flat
Distance between mounting plates	110 mm.
Weight	700 gr.
Opening	180°

Special Features:

Adjustable back by registration screw to work without incisal rod by keeping constant trajectories and inclinations during side and back/forward movements. Pure translation movement (key and instructions included). Anti-shock hinge rod in case articulator falls down. Bigger size lock screws for mounting plates.

Increased height and width

- (1) More space when using removable stumps systems.
- (2) More space for installation of mobile prosthesis with high chewing or big base.
- (3) More space when using magnetic plates

PM3-1372

Technical Datas:

Intercondylar distance	120 mm.
condylar inclination	fixed at 30°
Bennet angle	fixed at 7°
Incisal table inclination	10°
Distance between mounting plates	85 mm.
Weight	400 gr.
Opening (item 5000)	125°
Opening (item 5010)	180°

PM3-1373

Technical Datas:

Intercondylar distance	110 mm.
condylar inclination	fixed at 30°
Bennet angle	fixed at 7°
Incisal table inclination	flat
Distance between mounting plates	85 mm.
Weight	450 gr.
Opening	180°

PM3-1374

Anvil
Dental Laboratory
Instrument

Maxiofacial Surgery Instruments

A Bard-Parker handle with a No. 15 blade is the usual scalpel used to make incisions on the gums where a flap can be raised to gain access to tooth.

Retractors

Tongue, cheek and flap retractors are needed to provide adequate access to the tooth and are legion in number.

Needle Holders and Sutures

Sutures are used to replace and secure the gum flap in its former position, to limit the size of the wound and therefore restrict subsequent contamination with food debris, and to assist in controlling bleeding.

The usual suture size for intra-oral work is 4/0 and the material may be absorbable or non-absorbable

Scissors
Dissecting scissors and suture-cutting scissors are usually used.

Artery Forceps

These are designed to hold soft tissue without damaging it.

College tweezers are used to lift up sutures prior to removing them.

Periosteal Elevators

A number are available and are similarly used like a normal elevator but periosteal elevators have two heads – one at each end.

One end is sharp-tipped to expand the tooth socket while the other has a blunt end to remove granulation tissues or raise a gum flap.

Chisels and Mallet

Chisels are more appropriate in the operating theatre and are particularly useful for disto-angular third molars and upper wisdom teeth extraction.

Bone Curettes

The Mitchells trimmer is probably the most valuable instrument in the category and is used to remove granulation tissue in the tooth socket.

Bone Ronguer and Bone File

Used to smoothen any sharp bone edges after tooth extraction is done.

3

PM4-886
 For small lower molars with flat beaks.

W3

PM4-887
 For small lower molars with flat beaks. Similar to 3 but wingless.

4

PM4-888
 For upper molars with festooned beaks.

5

PM4-889
 For upper molars with festooned beaks.

7

PM4-890
 For big lower molars with flat beaks.

PAK MARRIN INTERNATIONAL

7A

PM4-891
 For big lower molars with flat beaks.

7B

Discontinued

PM4-892
 Discontinued.
 Shifted to 7A with similar form.

8

PM4-893
 For big upper molars with festooned beaks. Same size as 7.

8A

PM4-894
 For upper molars with deeply festooned beaks which can grab subgingival part.

W8A

PM4-895
 Similar to 8A but wingless.

10

PM4-896
 For small lower right molars with lat beaks, paired with 11.

11

PM4-897
 For small lower left molars with lat beaks, paired with 10.

12A

PM4-898
 Especially for the third upper left and lower right molars with lat serrated beaks, paired with 13A.

13A

PM4-899
 Especially for the third lower left and upper right molars with flat serrated beaks, paired with 12A.

14

PM4-900
 For partially erupted molars with deeply festooned beaks.

14A

PM4-901
 For partially erupted molars with deeply festooned beaks, bigger than 14.

14 AN

Discontinued

PM4-902

15

PM4-903

For big lower molars with flat and longer beaks, a strong spring.

18

PM4-904

For upper & lower molars with flat beak.

24

PM4-905

For upper left and lower right buccal molars' sub gingival cavities. The buccal side has wider fringe slightly festooned beaks. Paired with 25.

25

PM4-906

For lower left and upper right buccal molars' sub gingival cavities. The buccal side has wider fringe slightly festooned beaks. Paired with 24.

26

PM4-907

For upper molars in case of exposure of the tooth neck with slightly festooned beaks. Available for the second bicuspid.

28

PM4-908

For upper and lower molars with flat beaks, wide view.

30

PM4-909

For lower left molar sub gingival with slightly festooned beaks. The projection on the buccal beak slips into the furcation. Paired with 31.

31

PM4-910

For lower right molar sub gingival with slightly festooned beaks. The projection on the buccal beak slips into the furcation. Paired with 30.

42

PM4-911

For upper left molars with flat beaks, paired with 43.

43

PM4-912

For upper right molars with flat beaks, paired with 42.

51

PM4-913

For buccolabial molar furcations with slightly festooned beaks. Enables to press down the gingiva.

56

PM4-914

For lower molars with festooned beaks.

56A

PM4-915

For big lower molars with very slightly festooned beaks. One size larger than 56.

U67

PM4-916

Best for upper second molars with festooned beaks, compact size.

138

PM4-917

For upper right and lower left third molars with serrated offset beaks, paired with 139.

139

PM4-918

For upper left and lower right third molars with serrated offset beaks, paired with 138.

200

Discontinued

PM4-919

Discontinued
Shifted to 7 with same form.

201

PM4-920

For upper molars with slightly festooned beaks.

202

PM4-921

For big lower molars with flat beaks. A little bigger than 200.

203

PM4-922

For lower right molars and the first bicuspid with flat beaks. Paired with 204.

204

PM4-923

For lower left molars and the first bicuspid with flat beaks. Paired with 203.

205

PM4-924

For upper molars with very slightly festooned beaks.

G-1

PM4-925

For lower left molars with cheek and tongue pressure shoving wings. No need to wear dental dam but gauze or cotton rolls. Paired with G-2.

G-2

PM4-926

For lower right molars with cheek and tongue pressure shoving wings. No need to wear dental dam but gauze or cotton rolls. Paired with G-1.

0

PM4-927

For narrow bicuspid cervical zone with flat beaks. Available for deciduous anteriors as well.

00

PM4-928

For small bicuspid with flat beaks. Available for deciduous anteriors as well.

1

PM4-929
For bicuspid root with festooned beaks.

1A

PM4-930
For cervical cavities of bicuspid with festooned beaks.

2

PM4-931
For lower bicuspid with flat beaks.

2A

PM4-932
For bigger upper and lower bicuspid with flat beaks. A little bigger than 2.

W2A

PM4-933
Similar to 2A but wingless.

22

PM4-934
For upper and lower bicuspid with flat beaks, similar to 207 but wingless.

27

PM4-935
For upper and lower bicuspid with festooned beaks, similar to 206 but wingless.

29

PM4-936
For upper and lower bicuspid with flat beaks, for wider view.

206

PM4-937
For upper and lower bicuspid with festooned beaks. Similar to 27 but winged.

207

PM4-938

For upper and lower bicusps with flat beaks. Similar to 22 but winged.

208

PM4-939

For big bicuspid. Similar to 207 but the fringe is little bigger.

209

PM4-940

For lower bicuspid with flat beaks. Similar to 208 but a little smaller and stronger spring.

6

PM4-941

For anteriors with slightly offset beaks.

9

PM4-942

For labial cavities on anteriors with slightly offset beaks.

44

PM4-943

For anteriors cuspid and cavities with flat beaks.

90N

PM4-944

Offset beaks and stronger spring.

210

PM4-945

For anteriors labial and canines and cavities on bicuspid labial.

212

PM4-947

For gum compression on anteriors
with offset beaks.

212
SA

PM4-948

Similar to 212 but a little stronger
pressure to gingiva.

214

#214 is for sale while stock lasts.

PM4-949

For exposure of the tooth neck and for the temporary retraction of the gingiva.
Screw fixation guarantees a firm grip.
Ideal e.g. for adhesive fixing of veneers.

54

PM4-950

For upper right the first deciduous
molars. (B/54)

55

PM4-951

For upper right the second deciduous
molars. (A/55)

orthodontics pliers in Clinical Dentistry Orthodontics and Dentofacial Orthopaedics

Driven by the demand for tooth alignment, general practitioners are increasingly being asked to provide orthodontic treatment.

Dentists keen to participate in this area of expertise need to demonstrate the skills to identify suitable patients, the ability to provide conventional and contemporary orthodontic treatment and be aware of its limitations.

This is exactly what this programme delivers, along with the vital core competencies to excel in this unique postgraduate area.

The objective of the Orthodontics and Dentofacial Orthopaedics is to provide dental surgeons with the core knowledge and clinical skills essential for the delivery of competent, high-quality dental care.

It encompasses a blended learning approach and consists of a combination of lectures, seminars, workshops, clinical case discussions and laboratory sessions.

The flexible modular structure enables the programme to meet a wide range of student needs.

Instruments for dental implants are made of high quality stainless steel.

Our line of instruments include, but is not limited to, the following products:

Bone Grafting Instruments

- Bone Curettes (SPRATT) – designed for harvesting bone
- Bone Grinder – used in conjunction with a mallet to grind bone into appropriate particle sizes
- Bone Basin – weighted bottom design prevents tipping or spilling while mixing bone or other bone grafting materials

- Bone Compactors – feature serrated tips for compacting bone

Scalpels & Biopsy Punches

- Scalpels – offers convenience of a disposable with razor sharp cutting edge for superior cutting
- Biopsy Punches – designed at a steeper angle to ensure a finely honed, sharper edge
- Bone Spreading Chisels
- Freer Chisels – double or single cut tips used for widening ridges during implant preparations
- Graduated Chisels – feature reference markings for measurement during a bone ridge augmentation and are available in straight and curved patterns

Osteotomes

- Concave Osteotomes – break the floor of the maxillary sinus through the implant cavity and are available in curved (off set) and straight (with or without stops)
- Convex Osteotomes – raise the floor of the maxillary sinus and are available in curved (off set) and straight patterns (with or without stops)
- Progressive Osteotomes – designed to prepare the implant site in the maxillary area where bone density is 3 or 4
- Bone Spreading Osteotomes – sharp or blunt configurations for progressive circumferential expansion of the implant site

Sinus Lift Instruments

- Sinus Lift Curettes and Elevators – lightweight, wide diameter stainless steel hand instruments lift the sinus membrane for bone augmentation procedures

Gauges & Calipers

- Gauges & Calipers – various measuring devices available to determine appropriate length, width, and distance for implant procedures

Collagen Products

- Collagen wound dressing product offering includes products.

Sterilization Trays

- Sterilization Trays – designed to protect and store instruments during sterilization, transportation and storage

COMPOSITE INSTRUMENTS USE:

A composite (tooth colored) filling is used to repair a tooth that is affected by decay, cracks, fractures, etc. The decayed or affected portion of the tooth will be removed and then filled with a composite filling.

There are many types of filling materials available, each with their own advantages and disadvantages. You and your dentist can discuss the best options for restoring your teeth. Composite fillings, along with silver amalgam fillings, are the most widely used today. Because composite fillings are tooth colored, they can be closely matched to the color of existing teeth, and are more aesthetically suited for use in front teeth or the more visible areas of the teeth.

As with most dental restorations, composite fillings are not permanent and may someday have to be replaced. They are very durable, and will last many years, giving you a long lasting, beautiful smile.

- Closing space between two teeth
- Cracked or broken teeth
- Decayed teeth
- Worn teeth

Composite Filling

Here we have a cavity that has destroyed a part of the tooth.

The preparation has a diverging shape towards the opening. A resin material is placed and packed in the prepared site.

The cavity is removed with a drill and the site is prepared. Note that this preparation is smaller than the other methods of tooth restoration.

The resin is then polished with polishing burs.

Composite Filling Instruments

Burnishers Set **PM6-079**

HOW ARE COMPOSITE FILLINGS PLACED?

Composite fillings are usually placed in one appointment. While the tooth is numb, your dentist will remove decay as necessary.

The space will then be thoroughly cleaned and carefully prepared before the new filling is placed.

If the decay was near the nerve of the tooth, a special medication will be applied for added protection.

The composite filling will then be precisely placed, shaped, and polished, restoring your tooth to its original shape and function.

How are composite fillings placed?

It is normal to experience sensitivity to hot and cold when composite fillings are first placed, however this will subside shortly after your tooth acclimates to the new filling. You will be given care instructions at the conclusion of your treatment. Good oral hygiene practices, eating habits, and regular dental visits will aid in the life of your new fillings.

- Both sides (cutting edges) of the blade can be used for mesial or distal, facial or lingual application.
- The instrumentation sequence is the same as for universal curettes, using anterior and posterior designs.
- Anterior sickle scalers have a straight shank compared to the angled shank of posterior sickle scalers.

Periosteal Elevator Set of 7 Pcs PM6-199

periosteal elevator

a heavy metal instrument, with a broad, flat thin end for prising between periosteum and bone and lifting the periosteum prior to working on the bone.
See also sayre elevator, matson elevator.

periosteal pertaining to or emanating from the periosteum.

periosteal bud a stage in the development of bone to replace existing cartilage; periosteal bud formation results in the removal of calcified cartilage.

periosteal reaction

production of new bone by the periosteum in response to injury or irritation.

periosteal stripping

may occur in association with fractures, damaging vascular supply and delaying callus formation.

Flexible Sinus-Lift Curettes – for an optimum sensitivity during the direct lift procedure
 The perforation of the Schneiderian membrane is a complication that often occurs during a maxillary sinus floor augmentation procedure. The Sinus-Lift Instruments increase the sensitivity by blunt and flexible working tips with "Swing-Effect". Because of their special shapes and the characteristic of the stainless steel between the handle and the active part, light pressure is cushioned and gives the operator a direct and sensitive response. At the same time the risk to perforate the Schneiderian membrane is reduced to a minimum. Already at the development the focus was a practicable handling. Because of varying angulations and shapes of the active parts also in difficult areas they are easy to navigate also in difficult areas. The line of curettes consists of six different figures for every situation. They are complemented by spoon and condenser to place the bone graft.

The "Schneider's Membrane" of the sinus can be detached with curette by 1–2mm along the total cortical bone.

Curette is particularly useful in the lower part for detaching the membrane further. The same goes for the caudal area, especially when the membrane is 4–5 mm above the base of the maxillary sinus and the maxillary sinus is built up with granular material.

Curette makes it possible to lift the membrane further in mesial region. One working tip is especially designed for the right maxillary sinus and the other for the left maxillary sinus.

With curette the sinus membrane is further elevated in the upper and posterior part of the maxillary sinus wall.

Periotome Flexible function

Micro-serrated for simple and efficient separation of the periodontal ligament. Coated with titanium for greater hardness and longer service life.

The new, flexible periotomes by offer a new dimension to the function and safety of severing the periodontal ligament in preparation for extraction. Made of flexibly resilient stainless steel, serrated, and engineered with varying positions of "stress relief," two distinct sets of periotomes are offered. The MSP-1F and MSP-2F have ranges of motion of 6+ degrees, and the MSP-1XXF and MSP-2XXF have ranges of motion of 10+ degrees. Both sets are highly resistant to spontaneous fracture and provide different features and benefits. The MSP-1F and MSP-2F provide the stiffness needed in situations that require strength, while the MSP-1XXF and MSP-2XXF provide the flexibility necessary to follow root surface curvatures during operation and even help to locate the most efficient path of insertion.

PAK MARRIN INTERNATIONAL

STAINLESS STEEL REGULAR IMPRESSION TRAYS WITH RETENTION RIM – MICROSANDBLASTED

PORTAIMPRONTE FORATE REGOLARI INOX CON IL BORDINO RITENTIVO

Ssi is pleased to introduce their new series of impression trays microsandblasted crafted of the finest quality stainless steel utilizing the innovative technique of microsandblasting. Using microsandblasted stainless steel impression trays guarantee higher results even in difficult areas. The microsandblasted surface of Medesy's stainless steel impression trays are excellent in the retention of impression materials thus ensuring impressions as accurate as possible resistant to dry heat sterilization, autoclave and chemoclave.

Abbiamo il piacere di presentare ed offrire la nuova serie di portaimpronte Medesy Microsabbiate, prodotte con il migliore acciaio inox e rifinite mediante l'utilizzo dell'innovativa tecnica di microsabbatura, la quale permette di migliorare il grado di finitura e qualità del prodotto anche nelle zone di più difficile accesso. Inoltre, cosa estremamente importante, dalla superficie microsabbata si ottiene una migliore adesione del materiale da impronta e conseguentemente un migliore risultato del lavoro finale.

PM7-102/SB Set

Dental Lubricant

PM7-103
200 ml

DIRECTION: Designed for pre-sterilization application to promote smooth movement of hinged instruments. Provides protection from corrosion or deposits that could interfere with the movement of the instruments as tooth forceps, scissors, needle holders, etc. Ideal to be used when instruments joints are bind due to various deposits or rusted. This special penetrating sterile oil, that can be used before and after sterilization, will remove light rust and corrosion and will restore smooth working surface.

Use regularly to ensure longer trouble free instruments life. This lubricant will not dry up in the sterilizer. Physiologically inert.

INDICAZIONI. Progettato per le applicazioni pre-sterilizzazione per favorire un movimento scorrevole e delicato degli strumenti a snodo. Assicura la protezione contro corrosione e sedimenti, che possono interferire con il movimento degli strumenti come le tenaglie, le forbici, porta aghi, ecc... Ideale da utilizzare nel caso in cui depositi vari ed ossidazioni abbiano reso duri gli snodi degli strumenti. Questo lubrificante speciale, sterile e penetrante, che può essere utilizzato sia prima sia dopo la sterilizzazione, elimina entrambi, ossidazione e corrosione leggera, e ristabilisce una perfetta funzionalità. Usato regolarmente assicura allo strumento una lunga durata ed efficienza. Il lubrificante non asciuga in autoclave. Fisiologicamente inerte.

INDICATIONS. Projeté pour applications avant la stérilisation afin de favoriser un mouvement coulant des instruments avec des articulations. Assure protection contre la corrosion et les dépôts, qui peuvent interférer dans le mouvement des instruments comme les ciseaux, les pinces, etc... Utiliser ce lubrifiant est idéal quand les articulations des instruments sont devenues dures à cause des dépôts et de l'oxydation. Ce spécial lubrifiant, stérile et pénétrant, peut être utilisé avant et après la stérilisation, lève l'oxydation et la corrosion légères et rétablit une surface de travail lisse. Il faut l'utiliser régulièrement pour assurer à l'instrument une longue durée et efficacité. Ce lubrifiant ne se sèche pas dans l'autoclave. Physiologiquement inerte.

INDICACIONES. Proyectado para las aplicaciones antes-esterilización a fin de favorecer un movimiento corredizo de los instrumentos con articulaciones. Garantiza protección contra la corrosión y los sedimentos que pueden obstaculizar el movimiento de los instrumentos como porta-agujas, tijeras, pinzas, etc... Es ideal utilizar este lubricante cuando las articulaciones de los instrumentos están duras a causa de los varios sedimentos y de la oxidación. Este especial lubricante, estéril y penetrante, que puede ser utilizado antes y después de la esterilización, quita la oxidación y la corrosión ligeras y restablece una

INSTRUMENTS SEIZING AND STERILIZING FORCEPS PINZETTE COGLI / TRATTIENI

Special tweezer used as instrument seizing and sterilizing forceps as that the small instruments may be put into and taken out of the disinfecting solution without the protection of the gloves. Besides, by this tweezer the protective needles cannulas may be replaced and cover the used needle without any risk of injury and infection.

Pinzette speciali con le quali è possibile mettere e prelevare piccoli strumenti dalle soluzioni disinfettanti senza la necessità dell'uso dei guanti. Inoltre è possibile rimettere il cappuccio protettivo agli aghi usati evitando ogni rischio di ferite e infezioni.
